Pathology

Urinalysis is an important laboratory test that can be readily performed in veterinary practice and is considered part of a minimum database. It is useful to document various types of urinary tract diseases and may provide information about other systemic diseases, such as liver failure and hemolysis. Clinical chemistry (also known as chemical pathology, clinical biochemistry or medical biochemistry) is the area of chemistry that is generally concerned with analysis of bodily fluids for diagnostic and therapeutic purposes. It is an applied form of biochemistry (not to be confused with medicinal chemistry, which involves basic research for drug development). Lab Information Manual 2.2.7 ©2014 St. Boniface Hospital.
